**CALL IS NOW OPEN FOR THE THIRD  
EDITION OF THE MASTER!**

**APPLICATION DEADLINE: 30 NOVEMBER 2018**

# Why BIOCIRCE?

**BIOCIRCE** graduates will excel in strategic thinking on how to find solutions to practical issues related to innovation and corporate strategy, policy and regulation, collaborative R&D models, governance and intellectual property.

Basic scientific knowledge is no longer sufficient for building a successful career in the growing bio-economy industry. This sector has a high demand for trained professionals, and the **BIOCIRCE** master provides the tools and the knowledge needed to be successful in the public, private and non-profit sectors with a high grade of expertise in life science innovation.

The **BIOCIRCE** program enables graduates to be more competitive and to undertake international career paths in a wide range of organizations related to the world of industrial multinational firms, small- and medium-sized enterprises, national and international public administrations, think tanks and international trade institutions.

The transferable skills in areas like communication and research will give to graduates an added value in the related job market, whatever career they decide to pursue in your future.

# Participants

The program welcomes students from different backgrounds:

- Graduate scientists who want to pursue a career outside the lab
- Social scientists and business studies students who want to develop their interests in life science innovation
- People already working in biotechnology related fields who wish to engage further

BIOCIRCE program is designed for two groups of students that are professionals with either scientific or legal/economic background.

# Partner Organizations

BIOCIRCE Master program will provide skills and expertise necessary to deal with the full range of issues in Circular Bioeconomy. It provides an interdisciplinary program jointly offered by 4 Universities (University of Bologna, University of Milano-Bicocca, University of Napoli Federico II, and University of Torino), and by non-academic partners (Intesa Sanpaolo, Novamont SpA, GFBiochemicals SpA, and PTP Science Park di Lodi).

## Length of the Master

Students are required to attend 4 weeks full-time lessons, each one taught in a different University, and a 6-months stage in a company or institution. Individual study time is required to prepare for the intermediate evaluations and for preparing a final thesis work.

## Evaluation criteria and certificate

The progress will be assessed with intermediate evaluations after each module. Students are required to write a thesis about the work performed during the industrial stage that will be publicly defended.

Participants who attended at least 75% of the activities planned and passed each evaluation step will obtain a 2<sup>nd</sup> level Master Degree and 60 CFU
